Melting Point Apparatus Model 931 is designed for accurate measurement of melting points and for checking the melting range of the solid samples.

The apparatus consists of a silicon oil bath of about 200 ml capacity, covered with teflon cover, fitted with a special type of oil immersion heater having three holes for holding the capillaries, one for boiling point tube and one for thermometer. The apparatus consists of an in-built magnetic stirrer, with indicator for precisely adjusting the rate of heating of silicon oil-bath, an On/Off switch, a pilot lamp, with magnifier, a thermometer, glare free background illuminator and a high/low range temperature selector switch.
